Journal of Materials Processing Technology 86 (1999) 308–310

Journal of Materials Processing Technology

Subject Index of Volume 86

Acoustic emission signals
condition monitoring in reaming through acoustic emission signals, 81
Al–4.5Cu
the structure and soundness of Al–4.5Cu ingots cast in open mould using different filling rates, 146
Alumina
fabrication of metal matrix composite by infiltration process—part 2: experimental study, 152
Aluminum
using neural networks to predict parameters in the hot working of aluminum alloys, 245
AS wire
the analysis and study of the CASTEX force of AS wire, 115
Axisymmetric forging
axisymmetric forging analyses by the rigid–plastic finite-boundary element method, 208

Back-propagation
using neural networks to predict parameters in the hot working of aluminum alloys, 245
Bibliography
finite-element analysis and simulation of machining: a bibliography (1976–1996), 17
Bond
the analysis and study of the CASTEX force of AS wire, 115

CAD/CAM
computer-aided mold engraving: from point-data smoothing, NC machining, to accuracy checking, 101
Carbide tools
high speed threading of inclusion-modified steels with coated carbide tools, 216
CASTEX
the analysis and study of the CASTEX force of AS wire, 115
CASTEX force
the analysis and study of the CASTEX force of AS wire, 115
Coil coating
development of scratch tests for pre-painted metal sheet and the influence of paint properties on the scratch resistance, 300
Cold-drawing
the precision forming of pin parts by cold-drawing and rotary-forging, 252
Compression test
a mathematical theory of plasticity for compressible P/M materials, 159
Computer integrated system application
the optimal position for the injection gate of a die-casting die, 87
Condition monitoring
condition monitoring in reaming through acoustic emission signals, 81
Constitutive relation
an algorithm based on total-elastic–incremental-plastic strain for large deformation plasticity, 190

Cup-drawing
the limiting drawing ratio for plastic instability of the cup-drawing process, 168

Die-cast mold
the optimal position for the injection gate of a die-casting die, 87
Doctor-blade casting
development of BSCCO superconducting thick film using tape casting and thermo-pressing techniques, 177
Drawn and redrawn can
image composition for two-piece DRD cans, 264

Electrochemical machining (ECM)
investigation for controlled ellectrochemical machining through response surface methodology-based approach, 200
Electrode
the influence of small variations of wire characteristics on gas metal arc welding process stability, 226
End-quenching
inverse estimation of transient temperature distribution in the end quenching test, 257
Engineering ceramics
the role of SiO_2 impurities in the microstructure and properties of Y–TZP, 139
Expert system
an expert system for optimal selection of a press for a sheet metal operation, 131

Factor
design of a titanium nitride-coated WC milling cutter, 233
False contours
image composition for two-piece DRD cans, 264
π-Far infrared rays
ordering of atoms and magnetization, 67
Ferrite and coordination
ordering of atoms and magnetization, 67
Ferromagnetism
ordering of atoms and magnetization, 67
Finite deformation theory
a study of an oblique cutting model, 119
Finite-element method
a finite-element analysis of machining with the tool edge considered, 45
finite-element analysis and simulation of machining: a bibliography (1976–1996), 17
Finite elements
integral hydro-bulge forming of pressure vessel heads, 184
Finite-element simulation
an algorithm based on total-elastic–incremental-plastic strain for large deformation plasticity, 190
Finite strain elasto-plasticity
an algorithm based on total-elastic–incremental-plastic strain for large deformation plasticity, 190

Elsevier Science S.A.
PII S0924-0136(98)00372-0

Forming
axisymmetric forging analyses by the rigid–plastic finite-boundary element method, 208
Frictional coefficient
relationship between frictional coefficient and frictional factor in asymmetrical sheet rolling, 271
Frictional factor
relationship between frictional coefficient and frictional factor in asymmetrical sheet rolling, 271

Green–Naghdi stress rate
a study of strain localization in the fine-blanking process using the large deformation finite element method, 163

Hot working
using neural networks to predict parameters in the hot working of aluminum alloys, 245
Hydro-bulging
integral hydro-bulge forming of pressure vessel heads, 184

Image composition
image composition for two-piece DRD cans, 264
Inclusion-modified steel
high speed threading of inclusion-modified steels with coated carbide tools, 216
Ingot
projection of steel wire producing technology beyond the continuous-casting of an ingot using a direct combination of casting and metal forming, 278
Ingot structure
the structure and soundness of Al–4.5Cu ingots cast in open mould using different filling rates, 146
Instability
the limiting drawing ratio for plastic instability of the cup-drawing process, 168
Interelectrode gap thickness (IEG)
investigation for controlled ellectrochemical machining through response surface methodology-based approach, 200
Inverse prediction scheme
inverse estimation of transient temperature distribution in the end quenching test, 257

Knowledge-base
an expert system for optimal selection of a press for a sheet metal operation, 131
Kronig–Penny model
ordering of atoms and magnetization, 67

Lagrangian formulation
a study of an oblique cutting model, 119
Lagrangian large deformation finite-element method
a study of strain localization in the fine-blanking process using the large deformation finite element method, 163
Large deformation
an algorithm based on total-elastic–incremental-plastic strain for large deformation plasticity, 190
Level
design of a titanium nitride-coated WC milling cutter, 233
Limiting drawing ratio
the limiting drawing ratio for plastic instability of the cup-drawing process, 168
Lubrication
development of scratch tests for pre-painted metal sheet and the influence of paint properties on the scratch resistance, 300

Machinability
the machinability of nickel-based alloys: a review, 1
Machining
finite-element analysis and simulation of machining: a bibliography (1976–1996), 17
Material injection gate
the optimal position for the injection gate of a die-casting die, 87
Mechanical properties
the role of SiO_2 impurities in the microstructure and properties of Y–TZP, 139
Metallurgical production
energy analysis of a through-put radial forging machine, 291
projection of steel wire producing technology beyond the continuous-casting of an ingot using a direct combination of casting and metal forming, 278
Metal matrix composite
fabrication of metal matrix composite by infiltration process—part 2: experimental study, 152
Metal removal rate (MRR)
investigation for controlled ellectrochemical machining through response surface methodology-based approach, 200
Microstructure
the role of SiO_2 impurities in the microstructure and properties of Y–TZP, 139
Mold engraving
computer-aided mold engraving: from point-data smoothing, NC machining, to accuracy checking, 101

NC machining
computer-aided mold engraving: from point-data smoothing, NC machining, to accuracy checking, 101
Neural network
using neural networks to predict parameters in the hot working of aluminum alloys, 245
Nickel-based alloys
the machinability of nickel-based alloys: a review, 1

Oblique cutting
a study of an oblique cutting model, 119
Optimal press selection
an expert system for optimal selection of a press for a sheet metal operation, 131
Orientation factor
development of BSCCO superconducting thick film using tape casting and thermo-pressing techniques, 177
Orthogonal cutting
a finite-element analysis of machining with the tool edge considered, 45
Overcut (OC)
investigation for controlled ellectrochemical machining through response surface methodology-based approach, 200

Percentage contribution
design of a titanium nitride-coated WC milling cutter, 233
Pigment
development of scratch tests for pre-painted metal sheet and the influence of paint properties on the scratch resistance, 300
Pin
the precision forming of pin parts by cold-drawing and rotary-forging, 252
Plane-strain extrusion
optimally-controlled strain-rate dies for plane-strain extrusion, 56
Plane-strain tension
a novel technique for plane-strain tension testing of sheet metals, 237
Plasticity
a mathematical theory of plasticity for compressible P/M materials, 159

Plastic upsetting
upsetting of a cylindrical specimen between elastic tools, 73
P/M materials
a mathematical theory of plasticity for compressible P/M materials, 159
Porosity
the structure and soundness of Al–4.5Cu ingots cast in open mould using different filling rates, 146
Porous column
fabrication of metal matrix composite by infiltration process—part 2: experimental study, 152
Precision forming
the precision forming of pin parts by cold-drawing and rotary-forging, 252
Pressure vessel head
integral hydro-bulge forming of pressure vessel heads, 184
Processing techniques
the machinability of nickel-based alloys: a review, 1

Reaming
condition monitoring in reaming through acoustic emission signals, 81
Relative density
development of BSCCO superconducting thick film using tape casting and thermo-pressing techniques, 177
Response surface methodology (RSM)
investigation for controlled ellectrochemical machining through response surface methodology-based approach, 200
Reverse engineering
computer-aided mold engraving: from point-data smoothing, NC machining, to accuracy checking, 101
Rigid–plastic finite-boundary element method
axisymmetric forging analyses by the rigid–plastic finite-boundary element method, 208
Rigid–plastic finite-element method
axisymmetric forging analyses by the rigid–plastic finite-boundary element method, 208
Rotary forging
the precision forming of pin parts by cold-drawing and rotary-forging, 252

Scratch resistance
development of scratch tests for pre-painted metal sheet and the influence of paint properties on the scratch resistance, 300
Scratch test
development of scratch tests for pre-painted metal sheet and the influence of paint properties on the scratch resistance, 300
Shearing fracture
a study of strain localization in the fine-blanking process using the large deformation finite element method, 163
Sheet metal
a novel technique for plane-strain tension testing of sheet metals, 237
Short circuit transfer
the influence of small variations of wire characteristics on gas metal arc welding process stability, 226
Signal-to-noise ratio
design of a titanium nitride-coated WC milling cutter, 233
Silica (SiO_2) impurities
the role of SiO_2 impurities in the microstructure and properties of Y–TZP, 139
Sintering
the role of SiO_2 impurities in the microstructure and properties of Y–TZP, 139
Size effect
a finite-element analysis of machining with the tool edge considered, 45
Smoothing
image composition for two-piece DRD cans, 264
Solid cylinder
upsetting of a cylindrical specimen between elastic tools, 73
Steel wire production
projection of steel wire producing technology beyond the continuous-casting of an ingot using a direct combination of casting and metal forming, 278
Sticking friction
relationship between frictional coefficient and frictional factor in asymmetrical sheet rolling, 271
Strain gradients
a novel technique for plane-strain tension testing of sheet metals, 237
Strain rate
optimally-controlled strain-rate dies for plane-strain extrusion, 56
Superconductor stability
development of BSCCO superconducting thick film using tape casting and thermo-pressing techniques, 177

Temperature distribution
inverse estimation of transient temperature distribution in the end quenching test, 257
Tetragonal zirconia polycrystal (Y–TZP)
the role of SiO_2 impurities in the microstructure and properties of Y–TZP, 139
Thermo-elastic–plastic coupling model
upsetting of a cylindrical specimen between elastic tools, 73
Thermomechanical
energy analysis of a through-put radial forging machine, 291
The-smaller-the-better
design of a titanium nitride-coated WC milling cutter, 233
Threading
high speed threading of inclusion-modified steels with coated carbide tools, 216
Through-put radial forging
energy analysis of a through-put radial forging machine, 291
Tool edge radius
a finite-element analysis of machining with the tool edge considered, 45
Tresca yield criterion
optimally-controlled strain-rate dies for plane-strain extrusion, 56
Two-piece can
image composition for two-piece DRD cans, 264

Welding
the influence of small variations of wire characteristics on gas metal arc welding process stability, 226

Yttria stabilized zirconia (ZrO_2–Y_2O_3)
the role of SiO_2 impurities in the microstructure and properties of Y–TZP, 139
